Problem Statement

Recognition of the US accent from 6 different accents

The Input (Dataset)

	Gender			
Accent			† †† † † †† † † † †	
	Female	Male	Total	
US	90	75	165	
Non-US	90	75	165	
Total	180	150	330	

Literature Review

A Comparison of Classifiers in Performing Speaker Accent Recognition Using MFCCs

Speaker Accent Recognition Using Machine Learning Algorithms

Identification of the English Accent Spoken in Different Countries by the k-Nearest Neighbor Method

Methods Used

1st Article

MFCC = 12

Average accuracy of classifiers & computation time					
LDA	QDA	SVM(RBF)	SVM(PLY)	k-NN	
0.7353	0.8112	0.8208	0.8097	0.8548	
7.36 s	7.26 s	11.75 s	10.58 s	0.64 s	

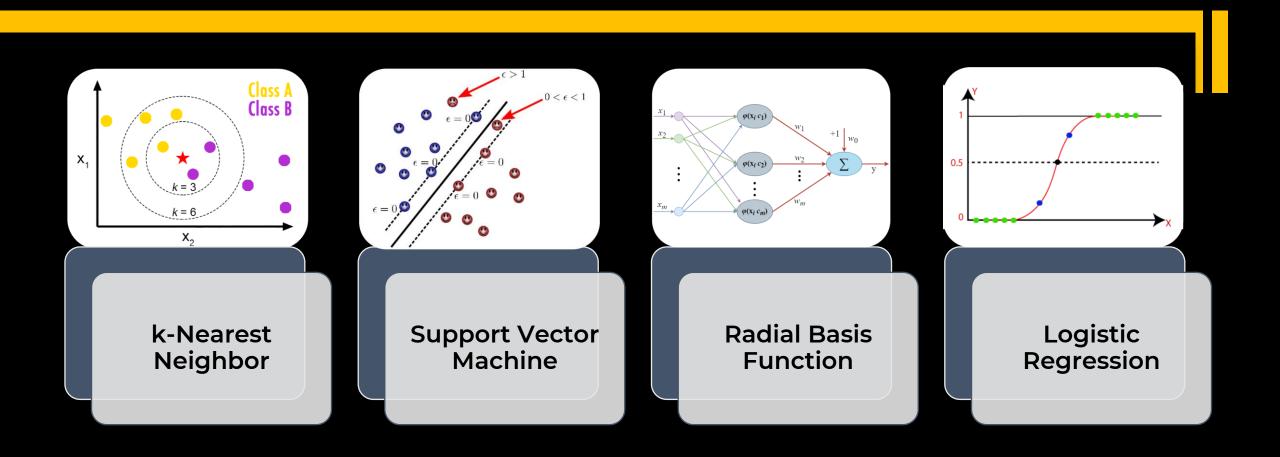

k-NN, # of NN = 5

Accuracy	Error Rate	Recall (r)	Specificity	Precision (p)	F1-Score
87.3 %	12.7%	84.1%	83.1%	84.3%	87.7%

3rd Article

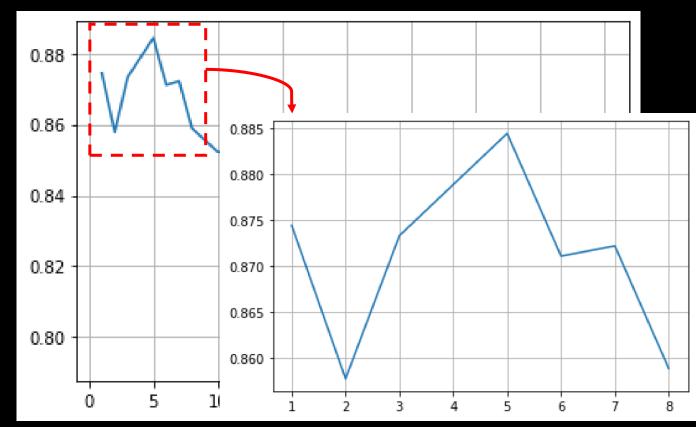

Accuracy	Kappa	Precision	Recall	F1-Score	MAE	RMSE
	statistic

Methods Used

Experimental Results

Finding the best NN number

Experimental Results

Method Used	Parameters	Accuracy	Time	Precision	Recall	fl score
k-NN	k = 5, k = 16	0.881	0.104s	0.916	0.853	0.877
RBF	sigma = 1, k = 10	0.882	7.13s	0.893	0.867	0.877
LR	C = 0.04, k = 5	0.781	2.29s	0.810	0.739	0.772
SVM (Linear)	C = 2, k = 4	0.775	0.096s	0.818	0.719	0.760
SVM (RBF)	C=6, gamma=0.03, k=4	0.894	0.048s	0.901	0.887	0.892
SVM (PLY)	C = 17, degree = 5, k = 4	0.881	0.034s	0.925	0.8305	0.875

Comparison Table

Accuracy				
Method	This Study	1 st Article	2 nd Article	3 rd Article
K-NN	88.1%	85.48%	87.3%	80.49%
SVM (RBF)	89.4%	82.08%		
SVM (PLY)	88.1%	80.97%		
RBF	88.2%			85.37%

Computation Time			
	k-NN	SVM (RBF)	SVM (PLY)
1⁵t Article	0.64 s	11.75 s	10.58 s
This Study	0.104 s	0.048 s	0.034 s

Conclusion & Future Works

- ✓ Parameter optimization for a predefined range
- √High-accuracy results were obtained with respect to the literature
- > Natural Language Processing

Thank you for your time 😂
